locally delivered.**

What is WinWeigh?

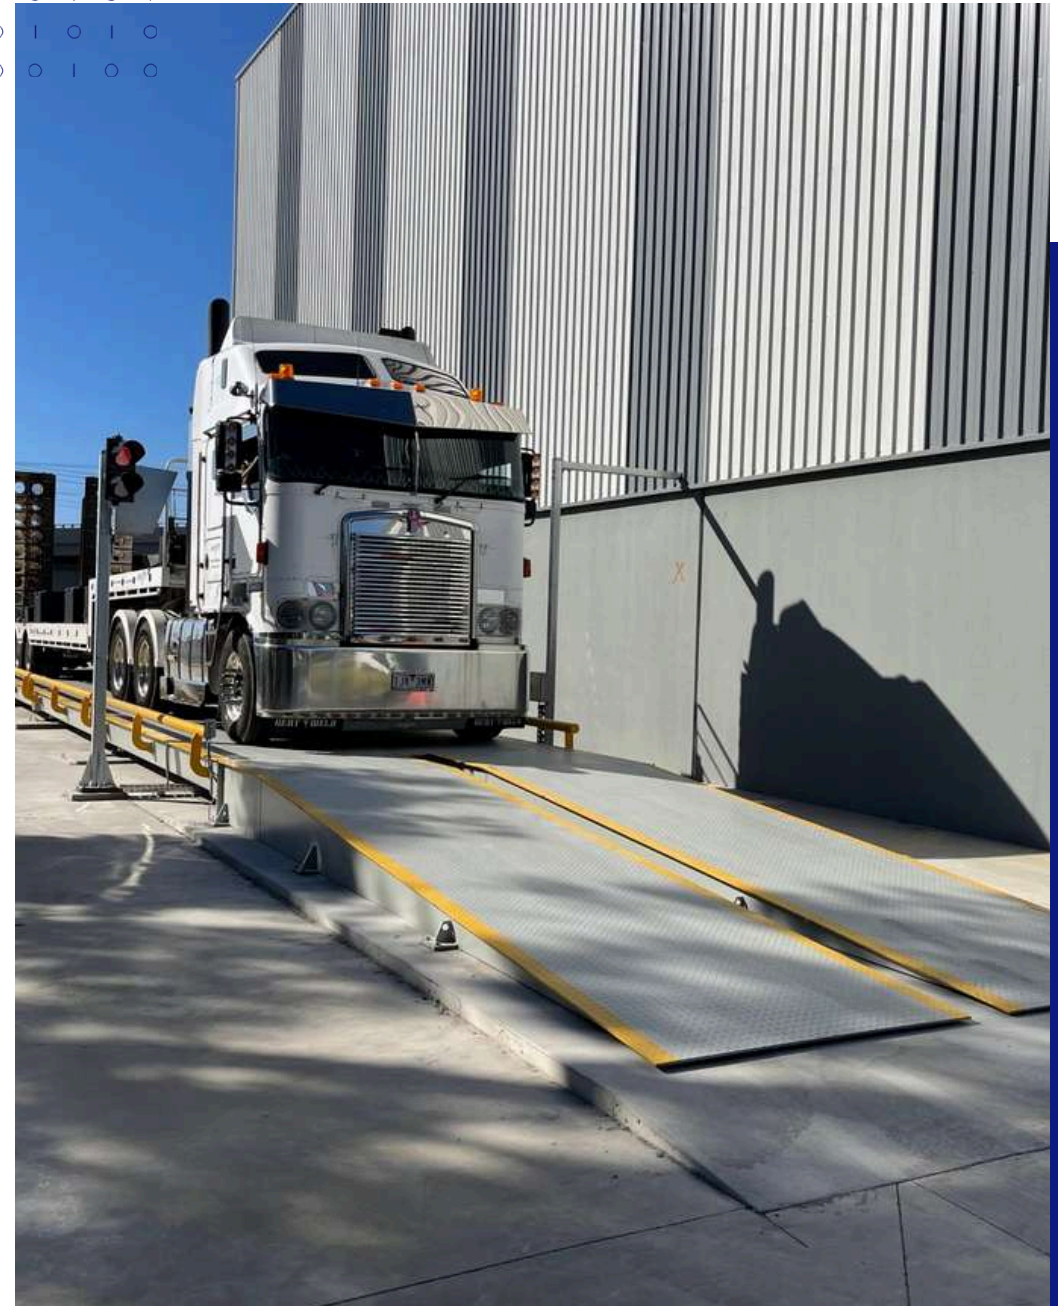

WinWeigh is weighbridge automation software that enables you to get the most out of your waste facility operations.

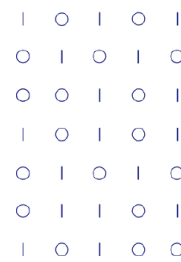

Our industry leading software turns a weighbridge from a scale into a fully-customised management system that suits your site and requirements. WinWeigh can be integrated to work for one standalone weighbridge facility or multiple weighbridges across multiple facilities.

WinWeigh is both a desktop application and a cloud-based solution that captures all weighbridge weighing data. The data is captured in various formats and can be exported via an API key, CSV or PDF file with automatic daily, weekly, or monthly reporting sequences.

All of the weighbridge and user data collected feeds back into a central portal for total oversight.

At NWI Group, our 30 years of experience working with Australian waste facilities and transfer stations means we have a deep understanding of the need for accurate weighing, data management, operational control and reporting.

Features and Benefits

Enhanced Chain of Responsibility (CoR) Compliance

Maintain compliance with Chain of Responsibility laws by precisely monitoring shipment weights to ensure adherence to legal load limits and CoR obligations. WinWeigh's accurate tracking minimises the risk of non-compliance while enhancing operational transparency.

Certified Legal-for-Trade Compliance

Guarantee that all weight transactions meet the highest standards with certification under NMI regulations. This ensures every measurement is accurate, dependable, and fully compliant with trade and regulatory requirements.

Instant Overload Alerts for Proactive Management

Receive immediate notifications whenever a vehicle or container exceeds its weight capacity. These real-time alerts allow swift corrective actions to avoid fines, safety hazards, or regulatory violations.

Real-Time Monitoring of Running Totals

Stay on top of weight compliance by continuously tracking the total weight of goods during loading and unloading processes. This functionality ensures vehicles operate within legal limits, helping to meet safety and regulatory standards effortlessly.

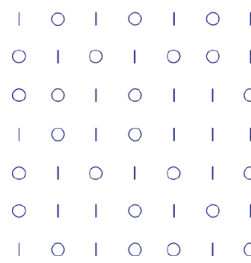

Comprehensive Reporting

Reporting has never been so easy. Fully customisable reports can be configured to suit each customer's requirements.

Easy Task Management

Spend less time typing and inputting data. WinWeigh allows you to take action with a simple click.

Features and Benefits

Stock & Contract Management

Manage your stock inventory in the same platform as your weighbridge operational software. Assign contract pricing to certain customers and jobs with running totals and notifications.

Accounting Systems Integration

A wide range of accounting platform integrations are available for the dual transmission of weighing and operational data. These include: MYOB, Xero, Microsoft Dynamics, SAP, Pronto and many more.

Payment Terminals

WinWeigh has a seamless integration with Quest Payment Systems to provide manned and unmanned payment solutions for weighbridge operations.

Ticketing Made Easy

Fully customisable ticket formats, both in A4 or weighbridge docket format.

Snapshot Camera & LPR Functionality

WinWeigh can integrate with camera systems to record images of vehicles entering and leaving site. LPR (License Plate Recognition) systems & intercom integration is also available.

Hardware Integration

Seamless Integration with various input devices such as dallas tags, RFID Card Readers, printers and remote push buttons.

SMS Notifications

WinWeigh has the optional functionality of sending out SMS notifications for a variety of alerts such as overweight vehicles, unregistered users and unusual activity.

Data Backup

An integrated data backup feature that can be setup for local or cloud based operation

WinWeigh Analytics Cloud Portal

WinWeigh Analytics draws on information captured across your logistics and displays it in an easy to read format. Powered by a PowerBI integration, WinWeigh delivers dynamic reports and visually engaging charts that consolidate all your data into a single, easy-to-navigate dashboard.

WinWeigh Logistics Software can improve the efficiency of sites with one weighbridge and sites with multiple weighbridges alike, by centralising all data in one dashboard.

Data Insights

Enhanced insights into your weighbridge operations that go above and beyond the standard reports.

Identify Issues

PinPoint abnormal data and perform audits for more detailed analysis.

Compare Data and Time Periods

Compare operational metrics across a variety of time periods, products, customers, vehicles and contracts.

WinWeigh Analytics Cloud Portal

WinWeigh’s flexible filtering and reporting capabilities make it easy to access and analyse the data you need. The system can be configured with customised filters and data options to meet the unique demands of your site. **Here are some examples:**

Shipment Volume by Product Category: Show me the total weight and volume of shipments sorted by product category over a specified time frame.

Overloaded Vehicle Monitoring: Show me all vehicles flagged for exceeding total or axle weight limits during a specific period to identify operational inefficiencies or compliance risks.

Carrier or Subcontractor Tracking: Show me all weigh events for a specific carrier or subcontractor transporting goods to monitor performance and compliance within a chosen time period.

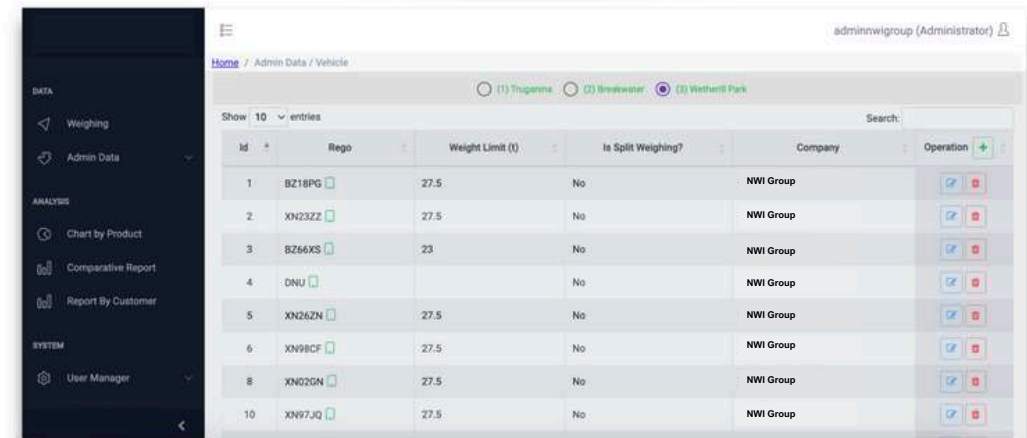

Vehicle Utilisation Metrics: Show me weigh events grouped by vehicle type (e.g., box trucks, semi-trailer) to analyse vehicle utilisation rates and efficiency.

These are just a few examples, but the possibilities for data are endless.

Unmanned Operations and Hardware Control

The Bilanciai DD2060 colour touchscreen terminal provides unrivalled user-flexibility and system integration for a wide range of weighbridge applications. The in-built computer removes the need for a local PC.

This powerful yet easy-to-use driver terminal has been specifically designed for unattended/automated weighbridge installations. The driver interface features a large industrial colour touchscreen, which guides drivers through the weighing process. The DD2060 can be used for both single and double weighing applications

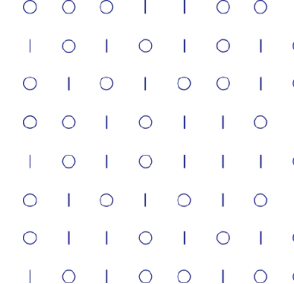

Bi-directional installations with DD2060 terminals at each end of a weighbridge offer the optimum weighing versatility and vehicle throughput.

Key features of the DD2060 terminal include:

- Fully configurable colour screen that can be easily read, even in bright sunlight
- Easy to use on-screen pictograms
- Range of smart access technologies:
 - Read/write RFID, magnetic, dallas tag etc.
 - Integral Ethernet intercom and thermal printer
 - 1D & 2D barcode and NFC readers
 - Optional voice activation feature
 - Vehicle management capabilities
 - Lockable cabinet for security

In addition to the use of a DD2060 unmanned driver terminal, WinWeigh features the ability to control various traffic management hardware such as:

- Boom Gates
- Traffic Lights
- Photo Sensors
- CCTV & LPR Cameras
- Graphical LED Displays
- Intercom Units

Unmanned Operations and Hardware Control

It's simple to customise your weighbridge system to suit your unique requirements. WinWeigh software integrates effortlessly with any hardware you choose—whether you're starting from scratch or enhancing existing equipment. WinWeigh acts as the core that unifies all components into a seamless and powerful management system.

As every site has different needs, NWI's flexible approach allows you to incorporate as much or as little hardware as necessary. For example, a basic setup with an unmanned driver terminal might be all you need to streamline traffic flow.

Alternatively, for enhanced security and control, you can opt for a more advanced system. This could include features like automated boom gates that restrict access until payment is confirmed, or snapshot cameras that capture vehicle license plates for precise record-keeping.

With WinWeigh Weighbridge Software, the options are virtually limitless. Share your vision with us, and we'll deliver a tailored solution that meets your operational goals.

Enhanced Chain of Responsibility (CoR) Compliance for Logistics Facilities

WinWeigh is specifically designed to address the unique challenges of logistics operations, offering comprehensive solutions to maintain compliance and increase productivity.

The system enables accurate data capture, tracking, and reporting of vehicle weights to ensure compliance with total weight and axle group limits. Every weigh-in is automatically logged and can be accessed at any time for review, providing full visibility and traceability of transport activities. Customisable alerts can also be set up to flag overloaded vehicles before they leave the facility, reducing the risk of safety incidents and avoiding regulatory violations.

Seamless NHVR Integration

To further simplify compliance, WinWeigh integrates directly with the National Heavy Vehicle Regulator (NHVR) database. This feature allows logistics facilities to verify the registration and roadworthiness of heavy vehicles in real time, ensuring that only compliant and safe vehicles are authorised to operate. By leveraging this integration, logistics facilities can reduce the risk of non-compliance and avoid penalties and safety risks.
